Indicates actual voltage if no batteries fitted

Two pole testers that use batteries should indicate a live circuit if the batteries die or have not been inserted into the tester.

This is normally indicated by a single LED but this does not indicate the actual voltage present.

The KT1780 & KT1790 have a separate circuit so they operate with no batteries or dead batteries and still indicate the actual voltage present.

AC & DC Voltage tests up to 690V
Clear Oversize luminous LED indication
Soft to touch overmoulded rubber body
Continuity Test
Self diagnostic test
Single Pole phase test
Phase Rotation test
